

Zaxcom Noise from 4900's (haven't tried my QRX100's yet like this...but I will soon)

L and R Channels are me turning up channels one by one...

There are 8 ISO Channels..

These are (2) Brand New 4900's....8 RF Channels, going into a Mint Cooper

All gains the same, all EQ off, all Filters off etc...

You can see #1, #3, #4 in 4900 unit #1 have motor boating..

Where 4900 unit #2 is very clean..

I do a few files of things like this...

Then I do turn on Transmitters, 942 first....then the super scifi stuff...

That 900LTH make, and these noises, though granted, very low level and are covered over by noise floor, when mike is plugged in, ARE being recorded

So how can we get rid of this extra noise?

The 4900 Unit #1 has to be repaired and paid for shipping RT and fixing by Zaxcom...

I think the Zaxnet is just antenna location...and positioning..

The Sci Fi sounds, can Zaxcom fix this?

I own Shure Axient, Shure UHR, and Lectrosonics (though I have sold most of these to go to Zaxcom) and these motor boating sounds and sci fi sounds do not occur with Axient, UHR and Lectro....just hoping Zaxcom can apply some engineering time to fix this... Thanks Jeff
